

## Hyperlink Clickthrough Tracking

360 SMS provides the unique ability to send links via SMS and have the clickthrough's tracked against the SMS History record. The clickthrough statistics are stored in the **Message URL** related list of the outbound **SMS History**. One can write powerful reports and Process Builder automations based on this data, making 360 SMS truly unique in its SMS Marketing abilities.

**SMS History Detail**

SMS Type	Outgoing	Owner	Steve Roch (Change)

Figure 2 - In the convo view the click count is displayed as a red number on the Globe Icon that allows you to also drill-down into the underlying SMS History record

### Key Points:

1. You must write to [support@360degreeapps.com](mailto:support@360degreeapps.com) and your account manager to request that **Link Tracking** be enabled, plus you will need a spare 360 SMS license as noted in item 3 below.
2. Link Tracking uses the standard Salesforce **Sites** technology that must be configured to communicate the clickthrough data back into Salesforce. Thus, Sites must be setup as documented in the next section. The Sites technology also facilitates **Delivery Reporting**.
3. Because the Salesforce Sites technology requires a Salesforce License to function properly, the feature requires the “**360 SMS Hyperlink Tracking License**” but any extra user license will do.
4. Link Tracking is not supported on **Salesforce Professional or Group Edition** because these versions do not support the Salesforce Sites technology.
5. When Link Tracking is enabled, an outbound SMS with a link always creates a **Message URL** record so that it is easy to report those records with or without a clickthrough. The **Clicks** Count will simply remain at 0 if never clicked.

- a. Since the Message\_URL table is native Salesforce and is updated each time the link is clicked in real-time, it is a huge benefit for Process Builder developers who commonly do the following with a simple trigger on the Clicks [count] changing from 0 to >0.

#### Examples:

- i. Create a scheduled Task for the Contact.Owner - “call this hot lead”
  - ii. Increase/Increment a Lead Score or change a Lead.Status
  - iii. Stop or Start an SMS Drip Campaign
  - iv. Send an email with even more information
6. When enabled in SMS Setup → General Settings an automatic email is sent to the SMS\_History.Owner when his/her link is clicked. See next section for more detail on this useful feature.
  7. **Bit.Ly** Support: When combined with the optional Bit.Ly integration, regular links entered into outbound messages convert to a shortened Bitly link automatically. The customer sees only the Bitly shortened link but within the SMS History the SF user sees the actual link.
    - a. The Bit.Ly integration is not required. However, without Bitly turned on the links go out converted to a trackable link that is indecipherable but typically too weird looking for most customers.
      - i. Here’s an example of a trackable but non-Bitly shortened link:  
[https://boldercrm.secure.force.com/IncomingSMS/tdc\\_tsw\\_LT?t=SFGoXWXW](https://boldercrm.secure.force.com/IncomingSMS/tdc_tsw_LT?t=SFGoXWXW)
    - b. You must setup a free or paid Bitly account using these [instructions](#).

- c. If you paste in a manually created Bitly link into your message while the automatic Bitly integration is enabled, 360SMS knows to **NOT** re-Bitly this link and will disable its creation of the Message\_URL. This is deliberate as you are wanting to track the link up on the Bitly server even though Bitly's reporting is much less robust than 360/Salesforce
- 8. Tiny URL support: An alternative to Bitly is TinyURL. Write to [support@360degreeapps.com](mailto:support@360degreeapps.com) to activate this method.
- 9. Only one link can be sent and tracked per outbound SMS.

## Define a Clickthrough Email Alert

Since version **1.32**, the system offers an automatic email alert if one of your links in an SMS was clicked. Enable this feature in the **General Settings** as shown below. The Email Template that is used is also customizable as it is a native Salesforce Email Template which can be edited, see below.

### Email Alert

## Configure Salesforce “Sites” for Delivery Status and/or Link Tracking

360 SMS offers automatic updating of the Delivery Status of outbound SMS Messages as well as Hyperlink Clickthrough Tracking.

Because, these services are writing into your Salesforce system to update various fields, we use the standard Salesforce **Sites** technology to create this communication channel. The site runs as its own user profile so we must also give it security access via the standard **SMS App Permission Set**.

**Note:** Sites are not supported in **Salesforce Professional Edition** and thus Delivery Status and Link Tracking are not available for Professional Edition.

When we’re all done, we’ll have something like shown in [Figure 4](#) below.

Sites

What is a Site?					
Sites (boldercrm.force.com)					
New					
Action	Site Label ↑	Site URL	Site Description	Active	Site Type
Edit   Deactivate	Incoming SMS	<a href="http://boldercrm.force.com/IncomingSMS">http://boldercrm.force.com/IncomingSMS</a>	Site used by 360SMS to update delivered status on SMS History and for the Link Tracking feature.	✓	Force.com

Figure 4 - Incoming SMS Sites needed for Delivered Status and Link Tracking

To create a Salesforce Site follow these instructions:

1. Go to Setup → Quick Find → **Sites**
2. You may or may not have a primary site already created for your org such as shown in [Figure 6](#). If no site has been previously created, you must create one, [Figure 5](#).
3. From [Figure 6](#), press **NEW** to create a new Site
4. Make the new Site look exactly as shown in [Figure 7](#).
5. When the Incoming SMS site has been created, copy its Site URL and paste it into the **SMS Set-up → General Settings → Site URL** as shown in [Figure 8](#).
6. The new **Incoming SMS** site runs under its own **security profile** and thus we must give it access to all the various 360SMS items by putting it into the same Permissions Set as regular users, see [Figure 9](#) for the steps to get there

## Sites

To get started, first register your company's Salesforce site domain. Your Salesforce site domain must be unique and must consist of only alphanumeric characters. Salesforce.com such as 'mycompanyportal.'

 You cannot modify your Salesforce site domain name after the registration process.

http:// **boldercrm** .force.com

☒ I have read and accepted the Salesforce [Sites Terms of Use](#)

## Security for Salesforce Sites

Because the Incoming\_SMS site accesses Salesforce like other users, we must give the **Incoming\_SMS** site user the same permissions that a regular user would have. We do this by adding the Site/User to the out-of-box 360SMS Permission Set (**SMS App Permission Set**). [Figure 9](#) illustrates the steps as it's a long haul to get to Permission Sets since the Sites User isn't a standard Salesforce user.

Additionally, the Site User must be assigned a 360 SMS license. As the Site User is a special kind of user you do this from the same Site User record where the Permissions Sets were just added.

Because the Salesforce Sites technology requires a Salesforce License to function properly these features require the **"360 SMS Hyperlink Tracking License"**.

## Configuring Bit.Ly Integration

360 SMS has automatic hyperlink conversion to Bit.Ly short links. This is highly useful when used in conjunction with the 360SMS Link Tracking feature as it disguises the rather long link that is manufactured by Salesforce to provide the necessary link tracking. Two steps are required below:

**Link Tracking**

Link Tracking Status From Backend: ⓘ
Enabled

Enable Link Tracking For Bitly: ⓘ
✓

Bitly Generic Access Token: ⓘ
\*\*\*\*\*

### 1. Create a Remote Site:

- a. Go to Salesforce Setup and use Quickfind to get to the Remote Site Settings as shown below.
- b. Create the Remote Site as shown in the screen capture
  - i. Remote Site Name: bitlyRemote\_360SMS
  - ii. Remote Site URL: <https://api-ssl.bitly.com>
  - iii. Active: True

remote

Expand All | Collapse All

### 2. Use an existing Bit.Ly Account or Create a new free account

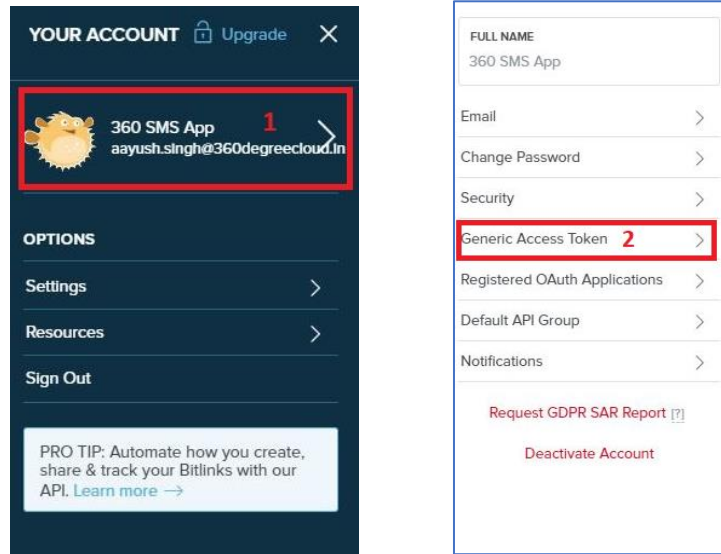

- a. Go To: <https://bitly.com/> and Sign Up
- b. Click on the hamburger icon on the top right side.

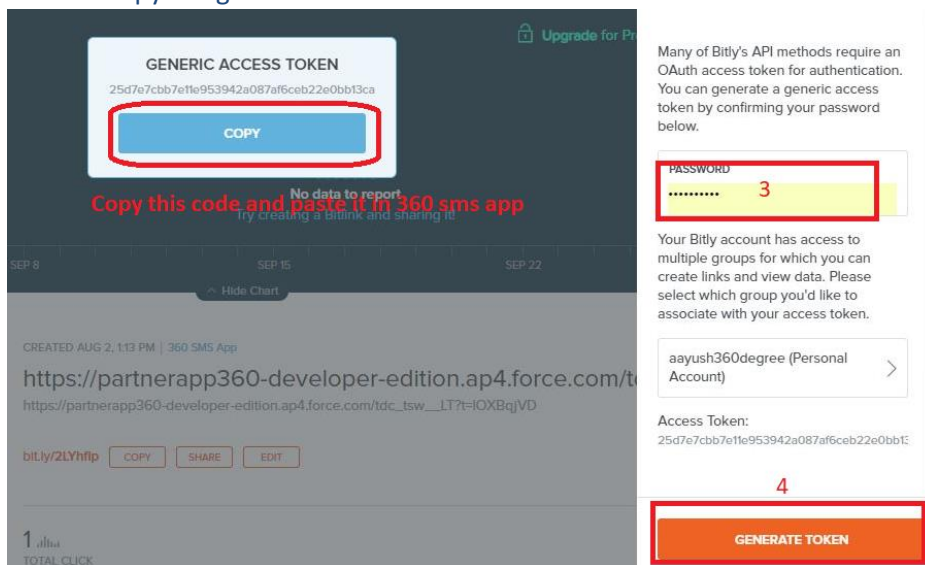

- c. Your profile will appear, drill down into your profile

d. Then click on the generate access token.

e. Copy the generated access token.

f. After creating the token you need to add the token to the General Settings Bit.Ly section

- i. In **SMS SETUP** → **GENERAL SETTING**
- ii. Paste in the token into the **Bit.Ly Generic Access Token** area, Figure 11
